

GNRC HOSPITALS - DISPUR

Department of Neurology & Memory Disorders

National Highway 37, Dispur, Guwahati, Assam 781006

CONFIDENTIAL CLINICAL MEDICAL RECORD - NEUROLOGY CONSULTATION

Patient Name: Borah, Biren	MRN: GNRC-2026-7819	Sex: Male
DOB / Age: 15/05/1954 (Age: 72)	Date of Exam: 22/08/2026	Primary Caregiver: Manash Borah (Son / Primary Caregiver)
Attending Neurologist: Dr. Arindam Kakati, MD, DM (Neurology)	Referring Physician: Dr. Bhaskar Sarma, MD (Internal Medicine)	Clinical Status: Outpatient Evaluation

REASON FOR EVALUATION

Comprehensive neurological and cognitive evaluation for progressive memory loss, spatial disorientation, and difficulty managing tea plantation pension over 24 months.

CLINICAL HISTORY (HISTORY OF PRESENT ILLNESS)

The patient is a 72-year-old right-handed Assamese male, retired tea estate manager, presenting with a 2-year history of progressive memory decline. Per family, initial symptoms were misplacing passbooks and repetitive questioning regarding daily schedules. Over the last 9 months, he developed significant executive impairment, getting lost while driving his scooter in familiar areas of Guwahati (Six Mile / Dispur) and making errors in bank transactions. Functional Assessment: Dependent for instrumental activities of daily living (IADLs) including banking, medication administration, meal preparation, and navigation. Independent in basic ADLs (dressing, eating, bathing) with minimal prompting. Behavioral Symptoms: Moderate apathy, reduced engagement in community Bihu committees, intermittent sundowning agitation, and nighttime restlessness. No hallucinations or motor tremors.

PAST MEDICAL HISTORY	ACTIVE MEDICATIONS
- Essential Hypertension (controlled on Telmisartan 40mg) - Type 2 Diabetes Mellitus (HbA1c 6.9%) - No history of TIA, stroke, or major psychiatric illness	- Telmisartan 40 mg PO daily - Metformin 500 mg PO BID - Atorvastatin 10 mg PO bedtime - Vitamin D3 60,000 IU weekly

PHYSICAL & NEUROLOGICAL EXAMINATION

Alert, oriented to person only, pleasant and cooperative. Cranial nerves I-XII intact. Motor: 5/5 power, normal tone across all limbs, no involuntary tremor or rigidity. Reflexes: 2+ symmetric throughout, plantars flexor. Gait: Normal stride and cadence, tandem gait mildly unsteady. Romberg negative.

STANDARDIZED COGNITIVE TESTING

Mini-Mental State Examination (MMSE): Score 18/30 (Moderate Impairment)

- Orientation (Time/Place): 4/10 (Disoriented to month, day of week, district/hospital floor)
- Registration: 3/3
- Attention & Calculation (Serial 7s): 2/5
- Recall: 0/3 (0/3 words recalled after 5-minute delay)
- Language & Visual Construction: 9/9 (Clock Drawing Test: Significant spatial distortion, hands placed incorrectly at 10 past 11)

DIAGNOSTIC WORKUP & NEUROIMAGING BIOMARKERS

- Laboratory: CBC, CMP, HbA1c, TSH, Serum B12 (480 pg/mL), Folate, RPR non-reactive. Metabolic and toxic etiologies ruled out.
- Brain MRI (Without Contrast): Bilateral symmetrical moderate-to-severe hippocampal and medial temporal lobe atrophy (MTA Score: Grade 3). Generalized mild cortical thinning. Minimal periventricular white matter hyperintensities (Fazekas Grade 1). No acute infarction, intracranial hemorrhage, or space-occupying lesion.

DIAGNOSTIC IMPRESSION

- Major Neurocognitive Disorder due to probable Alzheimer's Disease (ICD-10: G30.1 / F02.80), Moderate Stage.
- Clinical phenotype marked by severe anterograde episodic memory loss, spatial disorientation, and executive decline corresponding with medial temporal atrophy on neuroimaging.

TREATMENT PLAN & CLINICAL RECOMMENDATIONS

- Pharmacotherapy: Initiate Donepezil 5 mg PO at bedtime for 4 weeks; if well tolerated without bradycardia or GI symptoms, titrate to 10 mg PO daily. Plan to discuss Memantine at 3-month review.
- Safety & Care Planning: Strictly advise against driving motorized two-wheeler or car. Occupational therapy home safety evaluation recommended for fall risk and gas stove safety.
- Legal & Financial: Advised family to establish Power of Attorney and streamline banking operations.
- Caregiver Support: Referred family to Guwahati Alzheimer's and Dementia Family Support Network.
- Follow-Up: Review in Neurology clinic in 3 months to monitor cognitive trajectory and medication tolerance.
